

FOR DHS MULTISPECIALTY HOSPITAL

Content Strategy

A 6-month plan for SEO, AI Overviews, and local Ahmedabad reach · prepared 07 May 2026

Prepared by NovaBuildBot's SEO Bot

An AI agent from Nova AI Technologies LLP

NovaBuildBot ships SEO and content work end-to-end — research, drafting, schema, publishing, and distribution. **DHS does not need to hire writers, SEO consultants, or marketing leads.** Our standing commitment is one thing: Dr. Hardik Shah, as Medical Director, signs off on the strategy and reviews each post after publish. We adjust based on his feedback. Everything else — research, drafting, optimisation, publishing, distribution, monthly reporting — is on us.

Executive summary

DHS has a strong technical SEO foundation and a high-value differentiator — VELYS robotic knee replacement. The next growth lever is **consistent, doctor-validated editorial content** that captures patient questions early in the search journey. AI Overviews and ChatGPT now answer many medical questions before any link is clicked; ranking inside the AI summary depends on having clean, question-shaped, doctor-reviewed content indexed against your domain.

Strategy at a glance

Pillar & cluster	Service pages are pillars (VELYS landing, Joint Replacement, etc.). Blog posts are clusters that answer specific patient questions and link back to the pillar — signalling topical authority to Google and AI engines.
Three editorial rules	(1) Question-shaped title that matches the patient's actual query. (2) Doctor by-line on every post (YMYL E-E-A-T standard). (3) Each post links to one pillar and mentions Ahmedabad + a specific neighbourhood (Vastrapur, Gurukul, Drive-In, Satellite, Bodakdev, Memnagar, Thaltej, Sabarmati, Naranpura).
Funnel balance	DHS already has bottom-of-funnel pages (book appointment, doctor profiles, VELYS landing). The next 24 posts focus on top- and middle-of-funnel queries that feed those pages from earlier in the patient's research.

How this works

Single point of contact — Dr. Hardik Shah, Medical Director.

1. NovaBuildBot drafts Research, draft, schema, optimise — in DHS doctors' voice	2. We publish Live to /blog/ on the agreed weekly cadence	3. Dr. Hardik reviews At his convenience — sends feedback by email or WhatsApp	4. We adjust Edit the post and apply the feedback to future drafts
--	---	--	--

Total Dr. Hardik time: approximately 1 hour per month at weekly cadence — reviewing posts after publish and sending notes back. No pre-publish approvals to slow shipping; no review pool to coordinate.

6-month editorial calendar

One post per week, 24 posts in 6 months. Cornerstone = long-form pillar guide (1,200–1,800 words). **Mid-weight** = focused 600–900 word comparison or explainer. Same E-E-A-T standard for both.

Wk	Post (working title)	Tier	Funnel	Pillar
1 ✓	VELYS Robotic Knee Replacement now in Ahmedabad (launched)	Cornerstone	Booking	VELYS
2	Knee Pain in Older Adults — When to Consider Replacement	Cornerstone	Top	Joint Replacement
3	Robotic vs Traditional Knee Replacement — Quick Comparison	Mid-weight	Middle	VELYS
4	What to Expect on the Day of Your Knee Replacement	Cornerstone	Middle	Joint Replacement
5	5 Questions to Ask Your Knee Surgeon	Mid-weight	Middle	Joint Replacement
6	Knee Replacement Recovery — Week-by-Week Timeline	Cornerstone	Middle	VELYS
7	ACL Tears in Athletes — Symptoms, Surgery, Return to Sport	Cornerstone	Top	Sports Medicine
8	Why Indians Are Switching to Robotic Surgery — Patient FAQ	Mid-weight	Middle	VELYS
9	Trauma & Accident Care — When to Come to DHS Emergency	Cornerstone	Top	Trauma + ICU
10	Cost & Insurance for Robotic Knee Surgery in India	Mid-weight	Middle	VELYS
11	Heart Attack Warning Signs You Shouldn't Ignore	Cornerstone	Top	Cardiology
12	Hip Replacement vs Knee Replacement — Which Comes First?	Mid-weight	Middle	Joint Replacement
13	Spine Surgery — When Is Conservative Care No Longer Enough?	Cornerstone	Top	Spine Surgery
14	Diabetes & Joint Pain — The Hidden Connection	Mid-weight	Top	Internal Medicine
15	Cancer Surgery in Ahmedabad — Choosing a Surgical Oncologist	Cornerstone	Middle	Cancer Care
16	Reading Your Knee MRI Report — Plain-English Patient Guide	Mid-weight	Top	Radiology
17	Hernia Repair — Laparoscopic vs Open Surgery Compared	Cornerstone	Middle	General Surgery
18	Stroke Care in Ahmedabad — The Golden Window	Mid-weight	Top	Neurosurgery
19	Kidney Stones — Symptoms, Treatment & Prevention	Cornerstone	Top	Urology
20	Pre-op Anaesthesia — What Patients Worry About	Mid-weight	Middle	ICU
21	Gallbladder Stones — Surgery vs Watch-and-Wait	Cornerstone	Middle	Gastroenterology
22	Why Sleep Matters After Major Surgery	Mid-weight	Top	Internal Medicine
23	Choosing Between OPD and Hospital Admission	Mid-weight	Top	Internal Medicine
24	A Year of Robotic Knee Replacement at DHS — Patient Stories	Cornerstone	Booking	VELYS

Targets & what we report

Honest framing: targets, not promises. Reporting based only on tools DHS already has (Google Search Console + GA4).

HIGH CONFIDENCE	Branded queries ('DHS Hospital') up meaningfully · all 24 new posts indexed within 1–2 weeks · top-10 ranking on long-tail queries (e.g. 'VELYS robotic knee replacement Ahmedabad', 'knee pain old age Gurukul') · stronger snippet appearance for existing brand and ortho queries
STRETCH	Material lift in total organic sessions over a 12-month horizon · non-branded informational traffic growing fastest of any segment · top-3 ranking on a handful of priority queries by month 9
VARIABLE	Capturing AI Overview citations is genuinely volatile — Google's AI Overview model is updated frequently and quotes shift even between identical-content runs · specific timing varies; could land month 5 or month 14

Monthly report covers	Not in scope without extra setup
• Impressions, clicks, CTR per priority query (Google Search Console) • Average position movements on tracked queries • Branded vs non-branded query split • Organic sessions, top landing pages, engagement (GA4 — already installed) • New pages indexed and any crawl errors • AI Overview captures we spot manually • Recommendations & the next month's plan	• Appointment-form conversion attribution — requires GA4 conversion events on the appointment form, phone-click, and WhatsApp-click. We can wire this up in ~30 minutes if DHS wants it; until then, we report traffic, not bookings. • Detailed backlink monitoring — needs a paid tool (Ahrefs / Semrush, ~\$8–25k/month). GSC's link report is rudimentary. We can flag obvious mentions when we see them, but we will not claim comprehensive backlink data without the tooling.

What could derail this

Backlink gap — content alone rarely beats well-linked competitors. The cross-link from Dr. Hardik's site helps; broader PR and healthcare-directory listings are out of scope for this engagement but worth planning separately. **Algorithm volatility** — Google's medical-content updates can move rankings overnight; the strategy hedges by spreading across many long-tail queries rather than betting everything on one head term. **Local pack** — the Maps 3-pack eats most clicks for 'hospital near me' queries and is a separate Google Business Profile workstream.

Single decision needed before we ship Post #2

Dr. Hardik Shah signs off on this strategy. That is the only approval required upfront. From there, we ship one post per week on the calendar above, Dr. Hardik reviews each post after publish at his convenience, and we apply his feedback to the post and to the queue.
