

Content Strategy

DHS Multispecialty Hospital — www.dhshospitals.com

A 6-month plan for SEO, AI Overviews, and local Ahmedabad reach

Prepared for DHS Multispecialty Hospital	Report date May 07, 2026	Status For review & approval
--	------------------------------------	--

1. Executive Summary

DHS Multispecialty Hospital has a strong technical SEO foundation and a high-value differentiator (VELYS robotic knee replacement). The next growth lever is **consistent, doctor-authored editorial content** that captures patient questions before they decide where to seek care.

This document proposes a **pillar-and-cluster** content model, three non-negotiable editorial rules, a 6-month editorial calendar, and a recommended first follow-up post. It is intended for review with the DHS leadership team before publication begins.

Why now

Two industry shifts make this the right moment:

1. Google's AI Overviews and ChatGPT/Perplexity now answer many patient questions before any link is clicked. Ranking in the AI summary depends on having clean, question-shaped, doctor-authored content indexed against your hospital domain.
2. Local search competition in Ahmedabad orthopedics is rising. The hospitals that publish first capture the long-tail informational queries (e.g. "knee pain old age", "is robotic surgery safer") that feed the booking funnel.

2. Where We Are Today

Already shipped (May 2026)

Service pillar pages — strong, well-linked, schema-rich:

- **/velys-robotic-knee-replacement-ahmedabad/** — exact-match landing for the highest-intent VELYS query, with comparison table, recovery cards, both surgeon profiles, and 9 FAQs
- **/departments/robotic-surgery/** — robotic joint replacement hub with 10 question-shaped FAQs
- **/departments/joint-replacement/**, **/departments/orthopedics/**, all 21 clinical department pages
- **/doctors/doctor-hardik/**, **/doctors/doctor-swagat/** — Physician schema, expertise listed

Blog posts — one launch announcement live:

- **/blog/robotic-knee-replacement-ahmedabad/** — VELYS launch (May 2026)

The gap

The site's content funnel is currently **bottom-heavy**. We have transactional pages (book appointment, doctor profiles, the launch announcement) but very little **top-of-funnel** content — articles that capture patients while they are still researching symptoms and haven't decided where to seek care.

Top-of-funnel content is what AI Overviews quote, what featured snippets pull from, and what eventually drives a measurable share of appointment bookings 60–90 days after publication.

3. Strategy — Pillar & Cluster

Each major service is a **pillar page**. Around it, we publish **cluster posts** that answer specific patient questions and link back to the pillar. This signals topical authority to Google and gives AI engines a connected knowledge graph to draw from.

How a cluster looks

Pillar — **VELYS Robotic Knee Replacement**

- Cluster post — Knee pain in older adults: when to consider replacement
- Cluster post — Robotic vs traditional knee replacement
- Cluster post — What to expect the day of your knee replacement
- Cluster post — Knee replacement recovery: a week-by-week timeline
- Cluster post — Cost & insurance for robotic knee surgery in India

Three editorial rules — non-negotiable

1. Question-shaped title

Every post title is phrased as the patient's actual query. *"How long does knee replacement recovery take?"* beats *"Knee Replacement Recovery"* on AI Overviews and featured snippets, and reads more naturally when shared on WhatsApp. Use the same phrasing as the H1 — they should match.

2. Doctor by-line + medical reviewer

Healthcare content is YMYL (Your Money or Your Life) — Google's highest E-E-A-T bar. Every post must be authored by a credentialed DHS specialist and reviewed by a second physician. The author block is rendered with credentials (FRCS, MS, DNB, etc.) and links to the doctor's profile page so search engines can verify identity.

3. One pillar, one location

Each post links to at least one service pillar (VELYS, Joint Replacement, Cardiology, etc.) and mentions "Ahmedabad" plus a specific neighbourhood (Vastrapur, Gurukul, Drive-In, Satellite, Bodakdev, Memnagar, Thaltej, Sabarmati, Naranpura). Locality lives in body copy, breadcrumbs, and structured data — never in the title alone.

4. Search Intent Ladder

Patients move through three search stages before booking. We need content at each stage:

Stage	What the patient asks	Page type	Where DHS stands
Top of funnel (information)	"Why does my knee hurt?" "What is a slipped disc?" "Heart attack warning signs"	Symptom & condition guides written by specialists	Almost no coverage — biggest opportunity
Middle of funnel (comparison)	"Robotic vs traditional knee replacement" "Cost of bypass surgery"	Comparison guides, decision aids, recovery timelines	Partial — VELYS landing covers one comparison
Bottom of funnel (transactional)	"Best knee surgeon Ahmedabad" "Robotic surgery near me"	Pillar landing pages, doctor profiles, booking flow	Strong — VELYS landing, doctor pages, schema

Implication: The next 4–5 posts should focus on top-of-funnel and middle-of-funnel content. This balances the funnel and feeds qualified traffic into the existing transactional pages.

5. 6-Month Editorial Calendar

One post every 2–3 weeks. Each entry includes the funnel stage, the service pillar it supports, and the local Ahmedabad keyword angle.

Month	Post (working title)	Funnel Stage	Pillar	Author
May 2026	VELYS Robotic Knee Replacement now in Ahmedabad (launch)	BoF	VELYS	Dr. Hardik Shah
Jun 2026	Knee Pain in Older Adults — When to Consider Replacement	ToF	Joint Replacement	Dr. Hardik Shah
Jun 2026	Robotic vs Traditional Knee Replacement — What's Actually Different?	MoF	VELYS	Dr. Hardik Shah
Jul 2026	What to Expect on the Day of Your Knee Replacement	MoF	Joint Replacement	Dr. Swagat Shah
Jul 2026	Knee Replacement Recovery — A Week-by-Week Timeline	MoF	VELYS	Dr. Swagat Shah
Aug 2026	ACL Tears in Athletes — Symptoms, Surgery & Return to Sport	ToF	Sports Medicine	Dr. Swagat Shah
Aug 2026	Trauma & Accident Care — When to Come to DHS Emergency	ToF	Trauma + ICU	Dr. Hardik Shah
Sep 2026	Cost & Insurance for Robotic Knee Surgery in India	MoF	VELYS	Hospital + Dr. Hardik
Sep 2026	Heart Attack Warning Signs You Shouldn't Ignore	ToF	Cardiology	Dr. Sunil
Oct 2026	Spine Surgery — When Is Conservative Care No Longer Enough?	ToF/MoF	Spine Surgery	Dr. Hardik Shah
Oct 2026	Cancer Surgery in Ahmedabad — Choosing a Surgical Oncologist	MoF	Cancer Care	Dr. Dileep
Nov 2026	Hernia Repair — Laparoscopic vs Open Surgery Compared	MoF	General Surgery	Dr. Chirag / Dr. Devshi

Cadence: 2 posts per month avg. Adjust to specialist availability — we strongly prefer doctor-authored content over a steady drumbeat of generic posts.

6. Recommended Next Post (Post #2)

Working title: Knee Pain in Older Adults — When Should You Consider Knee Replacement?

URL	/blog/knee-pain-when-to-consider-knee-replacement-ahmedabad/
Funnel	Top of funnel (information)
Target queries	"knee pain old age", "knee pain treatment Ahmedabad", "when do I need knee replacement", "is my knee pain serious"
Pillar link	/departments/joint-replacement/ /velys-robotic-knee-replacement-ahmedabad/ →
Author	Dr. Hardik M Shah (MS Orthopedic, FRCS Germany)
Reviewer	Dr. Swagat M Shah (FIAAS UK)
Estimated length	1,200–1,500 words
Hero image	Original photo of an outpatient knee assessment (recommended)

Why this post specifically

- Highest search volume.** "Knee pain", "knee pain in old age", and "knee pain treatment" are massive queries in India. Approaching the topic from a symptom-first angle captures patients *before* they have decided on surgery — much earlier in the decision journey than "knee replacement" alone.
- Funnels naturally to your existing pillars.** The post will conclude by pointing readers who have decided to consider surgery toward the Joint Replacement and VELYS landing pages.
- E-E-A-T friendly.** Symptoms and red-flag content is exactly what Google rewards when written by a credentialed surgeon — the "experience" and "expertise" signals are obvious.
- AI Overview bait.** Patients ask AI assistants "is my knee pain serious?" daily. Question-shaped subheadings ("When is knee pain just ageing?", "Red flags that mean you should see a specialist") are the exact paragraph shapes AI engines quote.
- Local SEO win.** "Knee pain Ahmedabad" has clear commercial intent and no dominant ranking page yet — a clean ranking opportunity in 60–90 days.

Proposed outline

- Why knees ache as we age (the basic biomechanics)
- When is knee pain just ageing — and when is it something more?
- Red flags that mean you should see a specialist
- Conservative options doctors try first (medication, physio, injections)
- When is knee replacement the right answer?
- What changes with robotic-assisted knee replacement

7. How DHS Multispecialty Hospital approaches knee care in Ahmedabad
8. FAQs (5–6 question-shaped, AI-quotable)
9. CTA — book a consultation

7. Measurement & KPIs

Content marketing pays off in 60–120 days, not 60–120 hours. We need the right metrics so leadership can judge progress without false signals.

What we will measure (monthly)

- **Organic impressions** for target keyword clusters (Google Search Console)
- **Average position** for the 5–10 priority queries per pillar
- **Organic clicks** to each blog post and to its linked pillar page
- **Appointment-form conversions** attributed to blog landings (GA4 event)
- **AI Overview / featured-snippet wins** for tracked queries (manual quarterly check)
- **Backlinks earned** per post (Ahrefs / free SEO tools)

What we will not over-index on

- **Page views in week 1.** Most patient-research content takes 6–12 weeks to rank, then climbs steadily.
- **Bounce rate.** Informational content has higher bounce by design — readers got their answer.
- **Social shares.** Hospital content is rarely shared; that's not the channel.

Realistic targets (12-month horizon)

Total organic sessions	+150% over baseline
Branded queries (e.g. "DHS Hospital")	+50%
Non-branded informational queries	+300% (largest growth)
Blog → appointment conversion rate	1.5%–3% (industry benchmark for hospitals)
AI Overviews citing DHS for ortho queries	≥3 captured per quarter
Top-3 ranking on at least 5 priority queries	by month 9

8. Roles, Approval & Channels

Roles (proposed)

Author	DHS specialist relevant to the topic (Dr. Hardik, Dr. Swagat, etc.)
Medical reviewer	A second DHS physician — verifies facts & safety
Editorial lead	Hospital marketing / digital lead — owns the calendar & SEO targets
Publisher	Web/dev (currently via Eleventy + GitHub) — handles publishing & schema
Final approval	Medical Director (Dr. Hardik Shah) — sign-off before publish

Process per post

1. Editorial lead briefs the assigned doctor (target query, outline, length)
2. Doctor delivers a draft (rough, voice-noted, or written — whatever is easiest)
3. Editorial lead polishes for SEO + readability + house style
4. Second physician reviews medically
5. Medical Director gives final sign-off
6. Publisher pushes to /blog/, requests indexing in Search Console, links from any related pillar pages
7. Editorial lead schedules an Instagram + WhatsApp push within 48 hours of publish

Distribution beyond search

Publishing the post is half the job. Each post should also be:

- **Promoted on Instagram** — short-form summary post, swipe carousel of key takeaways
- **Sent on WhatsApp** — to the hospital's existing patient list with a one-line teaser
- **Cross-linked from Dr. Hardik's external site** (drhardikshahortho.com) — bidirectional backlink boosts both domains
- **Submitted to Google Search Console** — "Request indexing" on day of publish for fastest pickup
- **Featured in the next month's email newsletter** if/when one launches

Decision needed before we ship Post #2. Please confirm:

- Approval of the pillar-and-cluster strategy and the 6-month calendar
- Author + reviewer assignment for Post #2 (currently proposed: Dr. Hardik authors, Dr. Swagat reviews)
- Editorial cadence — 2 posts/month is the proposal; comfortable, sustainable
- Final approval workflow — single Medical Director sign-off vs. broader committee
