

FOR DHS MULTISPECIALTY HOSPITAL

Content Strategy

A 6-month plan for SEO, AI Overviews, and local Ahmedabad reach · prepared 07 May 2026

Executive summary

DHS Multispecialty Hospital has a strong technical SEO foundation and a high-value differentiator — VELYS robotic knee replacement in Ahmedabad. The next growth lever is **consistent, doctor-validated editorial content** that captures patient questions early in the search journey, well before the patient has decided where to seek care.

AI Overviews and ChatGPT now answer many medical questions before a single link is clicked. Ranking *inside* the AI summary, and earning the "hospital near me" click that follows, depends on having clean, question-shaped, doctor-validated content indexed against the DHS domain.

This document proposes a pillar-and-cluster model, three non-negotiable editorial rules, a 6-month weekly editorial calendar of 24 posts, and an honest set of targets — benchmarks, not promises — with the risks that could move them.

Strategy at a glance

Pillar & cluster	Service pages are the pillars (VELYS landing, Joint Replacement, Cardiology, etc.). Blog posts are clusters that answer specific patient questions and link back to the relevant pillar. This signals topical authority to Google and creates the connected knowledge graph that AI engines draw from.
Three editorial rules	(1) Question-shaped title. Every post title is phrased as the patient's actual query — <i>'How long does knee replacement recovery take?'</i> beats <i>'Knee Replacement Recovery'</i> for AI Overviews and featured snippets. (2) Doctor by-line on every post. Healthcare content is YMYL (Your Money or Your Life), Google's strictest E-E-A-T category. Every post is attributed to a credentialed DHS specialist. (3) One pillar, one location. Each post links to a service pillar and mentions Ahmedabad plus a specific neighbourhood — Vastrapur, Gurukul, Drive-In, Satellite, Bodakdev, Memnagar, Thaltej, Sabarmati, Naranpura.
Funnel balance	DHS already has bottom-of-funnel pages — book appointment, doctor profiles, the VELYS landing. The next 24 posts focus on top- and middle-of-funnel queries (<i>'knee pain old age'</i> , <i>'robotic vs traditional knee replacement'</i> , <i>'knee replacement recovery timeline'</i>) that capture patients earlier and feed the existing booking pages.

6-month editorial calendar

One post per week, 24 posts, two tiers.

Cornerstone — long-form pillar guide, 1,200–1,800 words. Anchors a service area and is built to rank and stay relevant for 12+ months.	Mid-weight — focused 600–900 word comparison, explainer, or condition primer. Same E-E-A-T standard, faster to read, captures specific queries.
---	--

Wk	Post (working title)	Tier	Funnel	Pillar
1 ✓	VELYS Robotic Knee Replacement now in Ahmedabad (launched)	Cornerstone	Booking	VELYS
2	Knee Pain in Older Adults — When to Consider Replacement	Cornerstone	Top	Joint Replacement

22	Why Sleep Matters After Major Surgery	Mid-weight	Top	Internal Medicine
23	Choosing Between OPD and Hospital Admission	Mid-weight	Top	Internal Medicine
24	A Year of Robotic Knee Replacement at DHS — Patient Stories	Cornerstone	Booking	VELYS

What to expect

Targets, not promises. SEO outcomes depend on competitor activity, backlink earning, algorithm shifts, and the starting baseline.

HIGH CONFIDENCE	Branded queries ('DHS Hospital') up meaningfully · all 24 new posts indexed within 1–2 weeks · top-10 ranking on long-tail queries (e.g. 'VELYS robotic knee replacement Ahmedabad', 'knee pain old age Gurukul') · stronger snippet appearance for existing brand and orthopedic queries.
STRETCH	Material lift in total organic sessions over a 12-month horizon · non-branded informational traffic growing fastest of any segment · top-3 ranking on a handful of priority queries by month 9.
VARIABLE	Capturing AI Overview citations is genuinely volatile — Google's AI Overview model is updated frequently and quotes shift between runs. Specific timing varies; gains could land at month 5 or month 14.

What could derail this

- Backlink gap.** Content alone rarely beats well-linked competitors. The cross-link from Dr. Hardik Shah's site helps; broader PR mentions and healthcare-directory listings would compound the gains and are worth planning separately.
- Algorithm volatility.** Google's medical-content updates can move rankings overnight. The strategy hedges by spreading across many long-tail queries rather than betting everything on one head term.
- Local pack dominance.** The Maps 3-pack eats most clicks for 'hospital near me' queries and is a separate Google Business Profile workstream — complementary to content, not replaced by it.

How we will measure progress

Monthly reporting from Google Search Console and GA4 (already installed): impressions, clicks, click-through rate, average position, branded vs non-branded query split, organic sessions, top landing pages, engagement, indexed pages, and any AI Overview captures spotted manually. Each report ends with a recommendation for the next month.
