

Content Strategy

A 6-month plan for SEO, AI Overviews, and local Ahmedabad reach · prepared May 07, 2026

Prepared by NovaBuildBot's SEO Bot · an AI agent from Nova AI Technologies LLP

NovaBuildBot ships SEO and content work end-to-end — research, drafting, schema, publishing, and distribution — so DHS does not need to hire writers, SEO consultants, or marketing leads. **The only thing we ask of DHS is a 10–15 minute medical-accuracy review** from one specialist before each post goes live. The buck stops at medical accuracy — everything else is on us.

Executive summary

DHS has a strong technical SEO foundation and a high-value differentiator (VELYS robotic knee replacement). The next growth lever is **consistent, doctor-validated editorial content** that captures patient questions before they decide where to seek care. AI Overviews and ChatGPT/Perplexity now answer many medical questions before a single link is clicked — ranking inside the AI summary depends on having clean, question-shaped, doctor-reviewed content indexed against your domain.

Strategy at a glance

Pillar-and-cluster	Service pages are pillars (VELYS landing, Joint Replacement, etc.). Blog posts are clusters that answer specific patient questions and link back to the pillar — signalling topical authority.
Three editorial rules	(1) Question-shaped title that matches the patient's actual query. (2) Doctor by-line + medical reviewer for every post (YMYL E-E-A-T). (3) Each post links to one pillar and mentions Ahmedabad + a specific neighbourhood (Vastrapur, Gurukul, Drive-In, Satellite, Bodakdev, Memnagar, Thaltej, Sabarmati, Naranpura).
Funnel balance	DHS has bottom-of-funnel pages (book appointment, doctor profiles, VELYS landing) but very little top-of-funnel content. The next 24 posts focus on top- and middle-of-funnel queries that feed the existing booking pages.

How it works

NovaBuildBot does	DHS does
Topic research · keyword analysis · drafting in doctor's voice · SEO & readability polish · schema · publishing to /blog/ · Search Console indexing · Instagram + WhatsApp distribution · monthly KPI report.	10–15 minute medical-accuracy review per post by the topic-relevant specialist · final sign-off by Medical Director (single email/tap). Total DHS doctor time at weekly cadence: ~1 hour per month , distributed across the doctor pool.

6-month editorial calendar — weekly

Cadence: 1 post per week, 24 posts in 6 months. **Cornerstone** = long-form pillar-anchoring guide (1,200–1,800 words). **Mid-weight** = focused 600–900 word comparison / explainer / FAQ. Reviewer column shows the proposed DHS specialist for the medical-accuracy check.

Wk	Post (working title)	Tier	Funnel	Pillar	Reviewer
1■	VELYS Robotic Knee Replacement now in Ahmedabad (launch)	Cornerstone	BoF	VELYS	Dr. Hardik
2	Knee Pain in Older Adults — When to Consider Replacement	Cornerstone	ToF	Joint Replacement	Dr. Hardik

24	Patient Stories — A Year of Robotic Knee Replacement at DHS	Cornerstone	BoF	VELYS	Dr. Hardik

Targets & what to expect

Content marketing pays off in 60–120 days, not 60–120 hours. Targets below are **benchmarks, not promises** — SEO outcomes depend on competitor activity, backlink earning, algorithm shifts, and your starting baseline.

High confidence (75–90%)	• Branded queries ('DHS Hospital') +50% • All 24 posts indexed within 1–2 weeks of publish • Top-10 ranking on long-tail queries (e.g. 'VELYS robotic knee replacement Ahmedabad') • Blog → appointment conversion 1.5–3% (industry benchmark)
Stretch (40–60%)	• +150% total organic sessions in 12 months • +300% non-branded informational traffic • Top-3 on 5 priority queries by month 9
Variable (25–40%)	• AI Overviews citing DHS for orthopedic queries (model-dependent) • Specific timeline (could land month 5 or month 14)

What could derail this

1. Backlink gap. Content alone rarely beats well-linked competitors. Dr. Hardik's site cross-link helps; we should plan for PR mentions and healthcare-directory listings in parallel. **2. Algorithm volatility.** Google's medical-content updates (Aug 2024 etc.) can move rankings overnight. **3. Local-pack dominance.** Google Maps 3-pack eats most clicks for 'hospital near me' queries; needs Google Business Profile work in parallel to content.

What NovaBuildBot will report monthly

Organic impressions and clicks per pillar · average position on the 10 priority queries · appointment-form conversions attributed to blog landings · AI Overview / featured-snippet wins · backlinks earned · recommendations for the next month.

Decision needed before we ship Post #2

- Approval of the strategy and the weekly 24-post calendar
- A review pool of 3–5 specialists for medical-accuracy reviews (10–15 min each, on rotation)
- Confirmation of single-tap final sign-off (Medical Director Dr. Hardik Shah, unless a committee is preferred)
- Authorisation for NovaBuildBot to publish to /blog/, request indexing, and run Instagram + WhatsApp distribution on DHS's behalf
- A 30-day baseline measurement window in GA4 + Search Console *before* we ship Post #2 — so the "+150%" claim has a real number behind it
